Pre-assembled igus® cable carriers for woodworking machinery

Sophisticated woodworking machines

Ninety CNC axles, tool change systems with eighteen tools, speeds of 328 ft/min: these CNC machining centers feature high performance machines with impressive capacities and imposing dimensions.

When three, parallel milling-and-boring heads travel in one woodworking portal, not only the cables, but also the cooling medium and compressed air for the pneumatic drives must be guided. Cable carriers are also used when extracting wood chips.
